Re: X-Car Technical Rule 6.9 Section F

Current Rule Reads as follows:

F. WHEELS: The STOCK OEM steel wheels or equivalent aftermarket steel wheels may be used. Wheels must meet the following criteria:
Wheels must be steel, 13" or 14" diameter, and a maximum of 7" wide.
All four wheels must be the same width, offset, and backspace. Maximum 4" Offset allowed.
The tires cannot extend outward beyond the fenders and quarter panels. You may not alter the shape of the fenders and quarter panels to meet this rule. If your tires stick out beyond your fenders or quarter panels, you may be assessed a 100 lb weight penalty.

New UPDATED Rule reads as follows:

F. WHEELS: The STOCK OEM steel wheels or equivalent aftermarket steel wheels may be used. Wheels must meet the following criteria:
Wheels must be steel, 13" or 14" diameter, and a maximum of 7" wide.
All four wheels must be the same width, offset, and backspace. **No less than 3" backspace** allowed.
The tires cannot extend outward beyond the fenders and quarter panels. You may not alter the shape of the fenders and quarter panels to meet this rule. If your tires stick out beyond your fenders or quarter panels, you may be assessed a 100 lb weight penalty.

This is effective as of 5/12/18
